Curso: Competition Policy for Telecommunications

Descripción:

Course Content:

The first part of the course will be conducted by recognized competition policy and antitrust experts from the US Federal Communications Commission (FCC), the Department of Justice, the Federal Trade Commission (FTC) and the Washington, DC legal community and will address basic aspects of competition policy, particularly as applicable to telecommunications industries. The discussion will focus on three interrelated aspects of competition policy:

To what extent (and with what qualifications and exceptions) can we anticipate that freely functioning private markets will satisfy consumer-citizens, needs, enhance society's wealth, and provide opportunities for workers and owners to increase their wealth? How do these principles apply to telecommunications markets?

What laws and legal institutions, especially anti-trust law and agencies regulating telecommunications firms, have proved beneficial in protecting and fostering market performance in those areas where reliance on marketplace forces and market decisions appears warranted?

What kinds of legal oversight of private behavior are necessary in cases where markets either will fail to operate optimally or cannot provide what society desires? For example, why does competition policy not fully embrace unregulated private markets for telecommunications services?

The second part of this course, taught by Federal Communications Commission (FCC) Bureau-level policy managers, offers executive-level telecommunications policy personnel a broad overview of telecommunications policy-making considerations in a dynamic and competitive environment. With the rapidly changing regulatory environment predominant in so many countries, regulatory bodies are

confronted with new challenges as they attempt to assimilate modern telecommunications technology.

The course describes the US regulatory structure including the legislative authority, the FCC organizational structure and an outline of the regulatory philosophy affecting the major services. The changing regulatory structure, which reflects current technological developments, and influences the need for competition and privatization, as mandated by the Telecommunications Act of 1996, is presented. Discussion of the FCC decision-making process, a site visit to the Washington, DC headquarters of the Intelsat Global Service Corporation, and a roundtable discussion concerning the changing global telecommunication environment, with class members, government, and industry representatives as participants, will be included to enhance the learning process.

Disciplinas: CIENCIA. INVESTIGACION. METODOLOGIA.
CIENCIAS DE LA TIERRA Y ESPACIALES.
POLITICA ECONOMICA Y SOCIAL. PLANIFICACION.
